

ARCHIVING OF VECTORS

ABSTRACT

The invention relates to a solid medium or matrix for storage of nucleic acid molecules (e.g. RNA and/or DNA), particularly vectors and especially plasmids, comprising a solid matrix preferably having a compound or composition which protects against degradation of nucleic acids incorporated into or absorbed on the matrix. The invention also relates to methods for storage or isolation/purification of nucleic acids using this solid medium, and *in situ* use of the stored or isolated/purified nucleic acids.
